

ETHICAL AND LEGAL ISSUES

LEGAL ISSUES

Legal issues arise in various knowledge management processes. There are many situations where disputes arise that have legal implications.

Legal implications of concern

- Employees missing to follow the standard of procedure willingly indicate non-cooperativeness to meet the standards.
- Product sale falls due to a product design which the design engineer wished to change was not allowed by the organization.
- The solution delivered by an employee based on the tacit knowledge gained was not supported by the organization. Because of this, approval from the customer also failed.
- The expert owns his/ her knowledge of the work if the prior agreement is not established.
- Problem raised due to the negligence of the individual who developed the system, then the individual is liable. If the problem is due to the negligence of the organization, the organization is liable.
